

dayGraphica Matrix 110...

Double sided polymer underblanket...

Many printers still prefer to use an underblanket to adjust the running height of their printing blankets, especially where there is a large undercut.

The dayGraphica Matrix 110 is a unique underblanket; built with polymer both sides that will give exceptional resistance to solvent and fountain solution ingress, thereby maintaining the blanket's gauge stability. This extremely flexible blanket is easy to fit, even in the most confined spaces.

The nominal overall hardness is above 90° Shore A for best possible dot reproduction and the highest print quality. The dayGraphica Matrix 110 gives the compressible top blanket a solid, uniform base on which to operate.

Gauge accuracy is guaranteed as the dayGraphica Matrix 110 is ground to gauge with a tolerance of +/- 0.015mm. The material is bi-directional allowing for cutting out of the roll in either direction for optimum economy.

Features

Benefits

Ground both sides for uniform thickness	Consistent print quality. Accurate colour register.
Fibreglass inner ply	Provides dimensional stability.
High uniform hardness	Enhanced dot reproduction.
Bi-directional construction providing less wastage	Cost effective and competitive.
Polymer on both sides	No solvent or water uptake.

Product Specifications...

Colour:	Grey
Surface:	Buffed
Thickness:	1.00mm nominal
Overall Hardness:	>90° Shore A 80° micro-hardness
Tensile Strength:	>35 N/mm
Face Compound:	Solvent resistant polymer

Optimise Your On-Press Performance

Over the years, Day's printing technologists and pressroom chemists have learned the dynamics between pressroom chemicals and printing blankets play a vital role in on-press performance and profitability. And they've learned how to analyse these dynamics to help printers resolve problems and optimise their printing results.

Day's laboratory experts, technical support team and sales consultants work together with printers to recommend the right combination of pressroom chemicals and printing blankets to achieve optimum performance. A consultative service offered only by Day International.
